ABSTRACT

This study aimed to describe the forms of the name of hamlets/villages (1) in terms of history and culture: the motivations and goals, reasons.

The study design used in this study was descriptive quantitative, while the research method used was the method of ethnography proposed by Spradley. Spradley ethnographic method contains five steps forward research workflow stages: determining the ethnographic research techniques, knowing the 12 basic steps ethnographic methods, taking gradually the 12 main sequences, learning to conduct ethnographic interviews during the research, analyzing and doing problem-solving activities. The main method of data collection was in-depth interviews as well as observation and documentation which were done as the companion method. The main data of this research study was the name of the villages and the main data sources were informants and documentation. Research instrument used were a list of descriptive questionnaires and structural observation sheets. The location of the research was decided by doing purposive sampling technique. The data analysis method used was the *agih* method by using directly divided elements (*BUL-Bagi Unsur Langsung: Indonesian*) technique and the historical-cultural method.

The results of this research study showed that in terms of linguistic and culture: the motivation and goals, reasons. The aspects of life are (1) in the region of *istanasentris*: the village names were dominantly taken from the history of the kingdom of life-culture (*Kraton*), whereas in the area of *nonistanasentris*, the dominant name of the villages were derived from history or culture of everyday life. The farther the area is from the center of palace, the smaller the culture's influence in naming the village. (1) There were 17 kinds of motivation and toponym's purpose in the area of *istanasentris*. Meanwhile, the motivation and purpose of toponyms in the *non-istanasentris* area were 15 kinds. (2) The main reasons of motivation and purpose of naming the villages in the area of *istanasentris* were 22 kinds which were dominantly capturing the shades of royal life, while reason in the area of *non-istanasentris* were 21 which were dominantly portrayed the daily lives.

KEYWORDS: toponymy, ethnografi, linguistic, cultural-history

A. Background To The Research

Naming deals with a system of symbols in culture. Symbolic systems which match the purpose of this study are linguistic and cultural symbols which deal with the hamlet / village toponyms from the linguistic area, as a linguistic and cultural symbol.

Language is the perfect symbol of the human experience. Language cannot be separated from the action, and is a means of expressions which has soft nuances (Brown and Bright, 1947: 66).

Herein lies the framework of the relationship between thought and language. For example, maps of Indonesia which are formerly used as a source of reference, such as topographical maps, large-scale hydrographic maps, are made by the foreigners, such as Fort de Kock as Bukittinggi, Buitenzorg (Bogor), Padangbai (Padang Baai) or Teluk Padang in Bali, Pulobai in Bengkulu as Baai Island, and Teluk Lada in the western end of West Java as Peper Baai.

Soepomo (2009) states that the study of village / hamlet names in the Yogyakarta province can be viewed from linguistic terms: grammar / bois causen such as Ndagen, Mbantul, and Mbandung, dysillabic such as Rejoinangun-Joinangun, Prang Wedanan- Prambanan, Sekarsuli- Karsuli; sociolinguistic terms such as Gamol (original), Pracimantara (compound), Suryodiningratan, Ngebel, Condrowangsan (Kraton culture). There are terms for a city / village / hamlet which come from Dutch: Buiten Zorg- Bogor (still in question), Klitren- Kulitrain, Jembatan Kewek - Chat Weg (Kewek is a Javanese term means prostitutes), Krekop-churchyard, Pathuk- Part Hook and Petinggen- a place where high-ranking officials live. So, there are original and Dutch village names and the point of view of naming is various.

From the beginning of the study through the author's overview about the name of places in some areas in Yogyakarta Province, it is found that there are place names derived from the physical characteristics (topography) such as Sendang, Krikilan, and Jonggrangan; place names derived from water world, such as Kalitirto, Sumbertirto, Jogotirto, Sendangtirto, Tegaltirto, etc.; place names derived from animal world, such as Terwilen, Sapen, and Njaranan while for Macanan turns that the name is derived from reading (Javanese: maca) not from tigers (Javanese: macan); place names derived from plant world such as Ndodongan, Jaten and Mblimbingan, etc.; place names derived from jobs / professions / work, such as Kemasan, Gamelan, Jagalan, etc. According to the author's overview,

the place naming (toponym) is various based on the initial survey and the author's analysis which the truth is still in doubt. The toponym will be more varied when it is examined in terms of linguistic, motivation and purpose, historical and cultural background systems.

A. FORMULATION OF THE PROBLEM

Based on the background of the study, it is necessary to do research on the hamlet / village naming system in Yogyakarta province, which can be formulated as follows.

1. a. How does the hamlet / village toponym system in Yogyakarta?
- b. Which is the dominant system in terms of linguistic and historical-cultural, and why?
- c. What are the main motivations and objectives? Why is that?

A. OBJECTIVES OF THE RESEARCH

Objectives to be achieved through this research are:

1. a. to describe how the hamlet / village toponym system, b. the dominant system used and its reason and c. the main motivation and purpose of it.

B. THE METHOD OF THE RESEARCH

1. Location of research, object of study, research time

The research location is the governmental area of Yogyakarta province, which includes one municipality and four regencies, namely Sleman, Bantul, Kulon Progo and Gunungkidul. The focus of the study will be determined based on the existence of information about the hamlet / village names in urban and suburban areas, which allows data to be found. Determining the location of the study also considers the hamlet / village characteristics, such as: the Kraton (palace) areas /

Dalam Beteng, urban areas (district city / city), suburban areas or rural districts.

After the above steps, the location is classified into two categories, namely *istanasentris* (city of Yogyakarta) and *non-istanasentris* (general, the cities of four regencies). The *istanasentris* location is classified into two, namely urban and suburban. The urban locations of *istanasentris* which are selected as urban areas are areas around the palace (Kraton), designated as urban research areas in the Municipality of Yogyakarta, and the location of the suburb locations of *istanasentris* are Kota Gede and common *non-istanasentris* locations which are then divided into two categories, namely urban and suburban districts. In order the research runs more efficiently, sampling needs to be done on the *non-istanasentris* locations (four regencies). First is the determination of the regency sampling. Two regencies are selected, namely Bantul and Gunungkidul. The locations are in rural or remote areas, indicated as areas which is far from the capital of the regencies / cities.

Next, from Bantul and Gunungkidul regencies, the sampling becomes smaller: district level. Districts in those regencies have hamlet / village names which are distinctive, popular, and rich in dimension characteristics.

The determination of the research focus based on purposive sampling technique aims to find a place / location of the study which has information / data required. Purposive sampling technique is a sampling technique which has consideration or specific purposes (Sugiyono, 2007: 118).

The object or target of the study is the name of hamlets / villages. The formation of the hamlet / village names is based on the word choice, the word form, the word structure, its meaning, its function and purpose which are related to the cultural context. The time of the study was in July 2011 until July 2012.

2. THE TYPE, METHOD, AND PROCEDURE OF THE RESEARCH

The study is qualitative research (basic research) for the purpose of the study is to achieve understanding, knowing, and describing the origin of hamlet / village toponym in Yogyakarta.

The method used is a qualitative ethnographic method. This method is derived from a new flow in anthropology called cognitive anthropology or ethnoscience or new ethnography. In modern ethnography, social and cultural forms of society are built and described through the analysis and reasoning of the researcher, whereas in the new ethnography, social and cultural forms of society are built and described through the arrangement of the member of the society's mind. The task of the researcher is to seek information out of mind (Spradley, 2007: xii-xiii). The ethnographic method referred to in this research is Spradley's ethnographic method, namely cognitive anthropology, known as lines of inquiry method of advanced stages (The Developmental Research Sequence). The explanation of lines of inquiry method of advanced stages covers five principles. First, determine the ethnographic research techniques, for example ethnographic interviews, participant observation, or draw genealogical maps, etc., Secondly, recognize 12 basic steps of ethnographic methods. Third, do the 12 steps and the sequence gradually. Fourth, learn to conduct ethnographic interviews in the reality of the study. Fifth, do problem- solving analysis (Spradley, 1997: 89).

The design of the study is an open research without focus because the data that needs to be searched or identified on the site are not certain. By determining the research target and research sites, the data types and data sources, sampling techniques, data collection methods and techniques, data validity techniques, and data analysis techniques outlined in this section, are the research form and strategy done by the researcher.

In this study, the direction of the study starts from the analysis of the data validity associated with the analysis of linguistic and cultural phenomena that lie behind them. The names of the hamlets / villages inventoried both oral and written sources, selected, reduced, classified, analyzed in linguistic terms (structural forms and its meaning), and analyzed the function and purpose of naming viewed from historical, cultural and political conditions / governmental aspects, shapes of objects and their physical environment (*ononim*).

3. DATA AND SOURCES OF DATA

The data of this study are the names of hamlets / villages. Sources of data in this study are both written data sources, such as the document / records of government, dictionaries, encyclopedias, books of folklore, saga, chronicle, or history, and oral data sources, such as the resource persons (informant). When the data needed are in the form of written data, then the data will be sought from various references which can be found in many libraries, language centers, archives and population section (under MCIT in each district / municipality / province), or museums. It means that the data sources are the research library, language centers, archive, demographic and territorial sections, museum, or others. Oral data are obtained through informants, such as the community leaders, cultural observers, toponym observer, and field researchers alike.

4. SAMPLING TECHNIQUES

The decision of the focus of this research study which was done through the sampling technique was based on purposive sampling. This sampling technique was done with the aim to find a place or location of the research study. Besides, it could give the information and data required for the data collection. Purposive sampling technique is a sampling technique with the certain consideration or a specific purpose (Sugiyono, 2007: 118). The use of these techniques was based

on the reason that the name of villages or hamlets that would be selected as the focus of this research study should have a distinctive nature, varied, and or popular, and dimensionally rich. Then the specified sampling led to the fulfillment of these properties.

According to purposive sampling, the technique used in this research study could also determine the location of the sample. The classification of the area of the village/ hamlet nomenclature was described as follows. First, the area of the palace represented the urban areas of the *istanasentris*; while Kota Gede represented the outskirts region of *istanasentris*. Second, the sub-district of Pajangan represented the urban area of *nonistanasentris* and the suburban area of *nonistanasentris* was represented by Imogiri. The location of *istanasentris* was represented by the city of Yogyakarta, while the location of *nonistanasentris* was represented by Bantul and Gunung Kidul.

5. THE METHOD OF DATA COLLECTION AND RESEARCH INSTRUMENTS

a. Method of Data Collection

The method of interviews with informants becomes the main method in order to explore and collect the data needed. Interviews conducted were open interview and the closed interviews. Closed interviews were conducted and focused on specific-general topics. Meanwhile, the open interview is the interview which gives freedom to the informant and encouraged him to speak broadly and deeply. Interviews were conducted repeatedly with key informants (Spradley, 1997: 22).

The data collection was done by using the literature and noted techniques which was according to Edi Subroto (1992) and using the method of observation and record methods and techniques which was according refer Sudaryanto (1993). The written data in the document were observed, read, and when it was found a relevant

data on the cards, the data were noted and sorted in such a way. In addition, the data names of hamlets / villages obtained from oral sources (informants) were conducted by interviewing with the informant and then combined with techniques for taking note. According to Edi Subroto (1992) data collection techniques such as the technique previously stated - working with informants, is called in-depth interviews.

The decision to choose the informants should consider several aspects, namely key or main informants and supplementary informants. Key informants were leaders or elders Javanese/Yogyakarta or even cultural figures. Meanwhile, the complement informants were community leader who deemed to know about the history of the hamlet/village.

The selection of informants was done by considering the following factors. 1) the indigenous people of Yogyakarta who were physically and mentally healthy, 2) understanding the depth of Javanese culture/Yogyakarta theoretically and practically, 3) knowing the cultural background of Yogyakarta, 4) the status as a public figure, *toponyms*' observers, or cultural figures, 5) having ample opportunity to be interviewed.

This method was taken in the form of ethnographic field research methods which were holistically integrative, descriptively thick and qualitatively analyzed in order to acquire a native point of view (Spradley, 1997: XVI).

b. The research instrument

Research data collection tools which are used in a study are called research instruments (Sugiyono, 1999: 97). Instruments used in this study were 1) a list of questions to guide the interview and advanced techniques using assistive technology to record - interview techniques coupled with the record, 2) the observation guide for bibliographical techniques and methods of observation which were accompanied by the

observation method (and read) and recording techniques, which are all equipped with photographic techniques to complement the observation data.

c. Validity and reliability of the data

Data validity checking was done by using triangulation techniques. The triangulation technique of data was done by checking the triangulation sources and triangulation methods. Triangulation of data sources is aimed that at the time of data collection, the research study could involve various sources of data (see the data source), while the triangulation method led to the notion that the kind of data collection methods and data collection techniques were more than one kind (Sutopo : 2006: 92-95).

In order for guarantee that the data was reliable, the genuine data were also pursued by extending the duration of the study and a frequent visitor at the study site and made a chart inter-unit relations problems.

d. Techniques of data analysis

The data analysis method used in this research study was interactive model. Interactive model is an analytical model that involves three components, namely data reduction, data display, and drawing conclusions and verification (Sutopo, 2006: 119-122). The third components of the analysis performed were done in combination with the data collection. Therefore, at the time of data collection running, the three components of the analysis were also deployed as well. Each knot was while already obtained and the data collection process still continued to run until the conclusion of the considered was steady. The implementation procedure was done repeatedly as forming a cycle.

The analysis in this research study was inductive, meaning that the analysis here was not intended to prove a theory or hypothesis. Theory and conclusions formed from a variety of data that actually found in the field and multi-perspectival discussed (Sutopo, 2006: 119-122). Furthermore,

the work of these three components analysis were followed by linguistic analysis with techniques of directly divided elements (*BUL – Bagi Unsur Langsung: Indonesian*) (Sudaryanto, 1993) and the historical-cultural analysis by using cultural historical method (Sarah via Satya Pradana, 2007; Sumarsih, 1981).

e. Presentation of research results

Presentation of research results was using two models, namely the presentation of informal and formal presentation (Sudaryanto, 1993: 144-157).

E. Description of the research study and the discussion

1. Description of toponyms of linguistic terms in the frequency and sample

a. Reviewed linguistics toponyms in the area *istanasentris* and *nonistanasentris*

In terms of linguistic description, it could be delivered these aspects respectively: building blocks of *toponyms* which were in form of basic words / singular, derivatives / complex shapes, or phrases, *polimorfemic* words or *monomorfemic* words, basic morpheme position of *toponyms*: in front, middle, or behind another morpheme, word or phrase category specific nuances / palace or daily, consisting of a single word or two words,

each aspect of how the frequency, as well as equipped with the formation and etymology. Number of *toponyms*' name of the hamlets / villages in the region of *istanasentris* was 79 names and 75 names belonged to *nonistanasentris* region. The description can be more briefly presented in the frequency table and examples of hamlets/villages as follows.

1. The Description of the Toponyms in Frequencies and the Examples based on the Historical and Cultural Aspects, Life Aspects, Motives and Objectives as well as the Reasoning

a. Toponyms in *Istanasentris* based on Kraton Life

The naming of hamlets/villages in palace area (*istanasentris*) investigated from historical, motivation, objective, as well as dominant reasoning aspects is based on Kraton Yogyakarta's historical facts and its life mindset (60 data or 75.9%), including: the residence, the names of the relatives of the king, royal officials, royal soldiers, royal servants, and the symbols of royal power, including parts of the palace buildings and sculptures as well as inscriptions. The following is the further descriptions of the toponyms.

Table: 1 a. The Description of the Toponyms in Frequencies and the Examples based on the Historical and Cultural Aspects as well as the Life Aspects

| No. | Examples of Names of hamlets / villages | Historical and Cultural Analysis Description | Life Aspect Category | | The Motives and the Intentions of the Toponyms | The Reasons of the Motives and the Intentions of the Toponyms |
|-----|---|--|----------------------|------------|--|---|
| | | | Life Aspects | Frequency | | |
| 1. | <i>Ngadisuryan</i> | The word is derived from the word [<i>hadisurya</i>] + | The category | 60 (75.9%) | as a marker of BPH | To inform the public that the |

| | | | | | | |
|--|--|--|--|--|---|--|
| | | [A-] / -an 'place'. [Ngadisurya n], n noun. Prefix [A- (Ng-) + [Hadisurya] becomes [ngadisurya], v, the name of BPH Hadisurya (one of Hamengku Buwono VIII sons) and gets the suffix [-an] which means 'dwelling'. The word [hadisurya] itself means [hadi] 'large/great' and the word [surya] 'sun'. The naming reflects the hope that the one who were given the name will become a great man who can protect many people, like the sun (surya (solar/sun) : Srengenge: Jw.) | is based on the name of one of the king's relatives. | | Hadisurya, one of the HB VIII sons, dwelling and as an honor to him | hamlet / village is the dwelling of BPH Hadisuryo, a prince, he was going to be an important royal officials. To honor him, the village was named after him as a marker (tetenger: Jv) that the village is his dwelling. |
|--|--|--|--|--|---|--|

b. Toponyms in *Istanasentris* Originating from Daily Life

In *istanasentris*, the naming of hamlets/villages viewed from historical and cultural aspect, its motives, and its objectives as well as its reasons is dominated by the kraton (royal) life, but there are some toponyms that are based on daily life, i.e. daily life events (19 data or 24, 05 %), such as oral

culture: folklore and history (4 data); plants (3 data); physical phenomena: geographical location, topography (3 data); goals/expectations (3 data); society's professions (3 entries); administrative positions (2 data), and the animal world (1 record). Further descriptions are served as follows.

Table: 1b. The Description of the Toponyms in Frequencies and the Examples based on the Historical and Cultural Aspects as well as the Life Aspects

| N o. | Examp le of Name of hamlet / village | Historical and Cultural Analysis Description | Life Aspect Category | | The Motives and the Intentions of the Toponyms | The Reasons of the Motives and the Intentions of the Toponyms |
|---------|--|--|-------------------------|-------------------|--|--|
| | | | Life Aspects | Fre que ncy | | |
| 1. | <i>Tegal Gendu</i> | <i>Tegal Gendu</i> is derived from the words [tegal] and [gendu]. <i>Tegal</i> | The category | 19 Dat | The name of the | To remind the society about the |

| | | | | | | |
|--|--|---|---|-------------|--|---|
| | | means a large agricultural dry land; and <i>gendu</i> means anxious or depressed. According to an informant, <i>Tegal Gendu</i> is derived from the events in which Ki Ageng Mangir (a powerful and influential figure/leader in Bantul / Mangiran) would meet Panembahan Senopati. In his way to meet Panembahan Senopati, when he arrived in a moor, he felt restless, agitated, and full of concerns because the two of them were hostile. | is based on a folklore and history (8 data) | a (24, 05%) | hamlet/village is related to a folklore which has a moral value. | existence of the folklore behind the name of the hamlet/village in which there is a moral value that can be a role model for the society. |
|--|--|---|---|-------------|--|---|

c. Toponyms in *Nonistanasentris* Originating from Kraton's Life

the naming of the hamlets/villages in *Nonistanasentris* investigated from historical and cultural aspects, motives, and objectives as well as

the dominant reasons is based on daily life (70 data or 93.3%). There are only a few Toponyms that originate from Kraton's life (5 or 6.6% of data).

Table: 1c. The Description of the Toponyms in Frequencies and the Examples based on Historical and Cultural Aspects as well as the Reasons

| No. | Examples of Names of hamlets /villages | Historical and Cultural Analysis Description | Life Aspect Category | | The Motives and the Intentions of the Toponyms | The Reasons of the Motives and the Intentions of the Toponyms |
|-----|---|--|---|---------------|--|--|
| | | | Life Aspects | Frequency | | |
| 1. | <i>Kradenan</i> (<i>Singosaren, Manggung, Tilaman, and Pajimatan</i>) | <i>Kradenan</i> is derived from [ka-an] + [Raden] then becomes [karadenan] and is shorten into [Kradenan] 'the dwelling of Radens'. Raden is a title given by the palace for Kraton/royal servants (those who work for the palace). <i>Kradenan</i> is a hamlet / village which is located near the tombs of the kings (<i>Pajimatan</i> : Jv) in Imogiri and the hamlet/village becomes home to the royal servants | The toponym is based on the Kraton's life | 5 Data (6.6%) | as a marker of Kraton servants taking care of the royal cemetery and Kraton Yogyakarta's heritage in Imogiri | To remind the society that the servants taking care of the royal cemetery are meritorious for Kraton Yogyakarta; therefore, they deserve to get the Kraton title, Raden. Those radens live in the west side of the Pajimatan which is called Kradenan. |

|--|--|--------------------------------|--|--|--|--|
| | | working in the royal cemetery. | | | | |
|--|--|--------------------------------|--|--|--|--|

d. Toponyms in *Nonistanasentris* Originating from Daily Life

In *nonistanasentris*, toponyms viewed from the historical and cultural aspects, the motives, and the intentions as well as the reasons are dominated by daily life cultures, namely the daily life events (history), (70 data or 93.3%). What on around their lives, respectively, are: plants (38

data), folklores and history (12 data), physical phenomena: geographical location (9 data), topography (3 data), Supernatural phenomena, (3 data), the professions of the society (2 data), salient behaviors (plambongan, ngincep, etc.) (2 data), and the animal world (1 data).

Table: 1d. The Description of the Toponyms in Frequencies and the Examples based on the Historical and Cultural Aspects as well as the Life Aspects

| No. | Examples of Names of hamlets/villages | Historical and Cultural Analysis Description | Life Aspect Category | | The Motives and the Intentions of the Toponyms | The Reasons of the Motives and the Intentions of the Toponyms |
|-----|---|--|--|-----------------|---|--|
| | | | Life Aspects | Frequency | | |
| 1. | <i>Sabrang Lor</i> and <i>Kidul Sabrang</i> | <i>Sabrang lor/kidul</i> is derived from the word [<i>Sabrang</i>] + [<i>lor/kidul</i>]. <i>Sabrang</i> is a kind of plants. In this area, there are a lot of growing <i>Sabrang</i> plants; therefore, it is used as the name of the hamlet/village. According to our informants, <i>Sabrang</i> can not be related to the meaning "other side" (<i>bahasa Indonesia</i>) because in that location there is no river nor avenue. (Basic categories of plant name) | The category is based on the name of a plant | 70 Data (93.3%) | as a marker that the name of the hamlet/village is from the name of a kind of plants called <i>Sabrang</i> that many of them grow in the area | To inform the society that the name of the hamlet/village is from the name of a kind of plants called <i>Sabrang</i> and also to show that <i>Sabrang</i> trees have many benefits for the society, especially for those who live in or near to a region that has many <i>Sabrang</i> trees. |

3. DISCUSSION

Discussion of the toponym seen from the historical and cultural aspects of life

1) Toponyms from the historical-cultural review

(a) Toponyms of the *istanasentris* region

Based on Table 1a, 1b, 1c, and 1d above, the name of villages in the *istanasentris* region which are related to the history and culture of life in the palace is 60 data of 79 data (75.8%). The village name of Kota Gede District which is as a part of the *istanasentris* region, but far from the center of culture, has been decreasing as previously it is based on the history and cultural life of the palace. A few of village names based on the history and cultural life of the palace are *Gedongkuning*, *Tegalendu*, *Sokowaten*, *Bumen*, *Alun-alun*, and *Purbayan*. In the *istanasentris* environment, there are 19 (24.05%) more names of villages derived from everyday life such as *Peleman*, *Pilahan*, *Sambirejo*, *Pelemsari*, *Karang*, *Kitren*, *Ledok*, *Equate*, *Jagungan*, and so on.

(b) Toponyms in the *non-istanasentris* region

Based on Table 1a, 1b, 1c, and 1d, it can be described that the research findings on toponyms of village names seen from the history and culture can be explained that the names of villages in the *non-istanasentris* region are predominantly motivated by the history and culture of everyday life (70 data or 93.3%) and by the palace life (5 data or 6.6%). The history and culture of everyday life are associated with the name of the trees/ plants, folktales / folklore and history, animal's names, disease's names, administrative titles, position / location of the environment / geography, names of profession and topography, human activities and social relationships, names of public figures, dreams / expectations, ononym / hydrography / topography, and phenomena of the nature or objects.

2) Toponym seen from the review of motivation and purpose and its reasons

The motivation and purpose of naming the villages of Yogyakarta Special Province in the *istanasentris* region (namely Sub-district of *Kraton*, *Matrijeron*, *Gedongtengen*, *Pakualaman*, and *Kota Gede*) includes (1) a marker of the residence of palace's relative, (2) as a marker of the residence of palace servants (courtiers), (3) a

marker of palace warriors' residence, (4) A dragon is a symbol of power, (5) Some parts of the palace building is as a symbol of authority, (6) the location of the building is categorized as an important place as in the past it was inhabited by the officials of the palace (closed areas), (7) a marker of the location is associated with the high number of tamarind trees which grow, (8) a marker of the location is the residence of the village chief / *jekso* (administrative officials), (9) a marker of the geographic location within the palace, (10) a sign of the topographic of regions, (11) a marker of human activities and social relations, (12) a sign of the names of animals, (13) a marker of the residence of community leaders, and (14) a sign of dreams and expectations.

The reasons of the motivation and purpose of naming the villages in Yogyakarta Special Province particularly in the *istanasentris* region are as follows: (1) to mark the village so that many people will know their relatives or officials who live in the area (to honor), (2) to mark the residents, means that people will know or know more who the royal employees who live in that place and what their profession in the palace (to honor), (3) to indicate power, (4) to mark the administrative officials' residence, (5) to mark the position of the villages in/ around the palace, (6) to mark the existence of human activities, (7) to characterize the condition of the land (topography), (8) to mark the animals kept by residents the most, (9) to mark a respect for public figures, (10) to indicate the dreams and expectations, (11) to indicate the example of life through folklore and historical facts, (12) to mark the proximity of the community with the world of plants, (13) to mark the proximity of the community with the world of animals, (14) to mark the geographical position of certain region, (15) to mark the socio-economic condition of the people, (16) to mark the stopover of nobility, (17) to mark the tombs of kings, (18) to mark the supernatural natural phenomena, and (19) to mark the world of geography and hydrology.

The motivation and purposes of naming the hamlets (*pedukuhan*) and villages in Yogyakarta province, particularly in the region categorized as *nonistanasentris* (such as the district of Pajangan, Imogiri, Wonosari, and Tepus), include: (1) The markers of the settlement of the courtiers, (2) the markers of folklore and history, (3) the markers of the names of animals (4) the markers of the names of plants, (5) the markers of administrative positions, (6) the markers of geographic location the environment / surrounding, (7) The markers of human activity and social relations, (8) the markers of social and economic conditions, (9) the markers of public settlement, (10) the markers of natural phenomena, (11) the markers of the topography, (12) the markers of the *hidronim* (13) the markers of topography and history, (13) the markers of natural and historical phenomena, (14) the markers of plant names and history, (15) the markers of ideals and expectations, (16) the markers of the residence of the community leaders, and (17) the markers of the topography and *oronim*.

The reasons for the motivation and purpose of naming the hamlets / villages in the province, particularly the territory categorized as *nonistanasentris* are as follows: (1) to indicate that the employee knew or know anyone who lives in a palace and what his profession was in the palace, (2) to indicate examples of folklore and historical facts, (3) to indicate the intimacy between human and animals (4) to mark the intimacy between human and plants (5) to mark the administrative official residence, (6) to mark the geographical position of the region, (7) to indicate the existence of human activities, (8) to mark the socio-economic conditions of the community, (9) to mark the settlement of the noble (10) to mark the geography and hydrology of the world, (11) to mark the physical natural phenomena, (12) to mark the topography of the land, (13) to mark the topography of the land and history, (14) to mark the tombs of kings, (15) to mark the topographical

and plant world, (16) to mark the topography and landscape, (17) to characterize the topography and *oronim*, (18) to mark the ideals and history, (18) to mark the respect for public figures, (19) to mark the professions existing in the society, (20) to mark the respect for public figures, and (21) to characterize the physical phenomena of nature and history.

In addition to these similarities, there are also some differences found in terms of the motivation and purpose of naming the hamlets/villages between the two regions. The motivation and the purposes in the areas categorized as *istanasentris* are dominantly showing the life of the kingdom (the relatives and the officials of the palace), whereas in the *nonistanasentris* areas, the motivation and the purposes are closely dealing with daily life, especially about plants and folklores. This fact is an evidence showing that culture affects language. This is in accordance with the law of relativity as stated by Saphir and Whorf (Sampson, 1980). Cultural life of the palace life partially color the life of the social community nearby, while the culture of everyday life form the thinking pattern of the public.

F. CONCLUSIONS

Based on the description of the research findings and discussions, there are some conclusions as follows:

The toponyms of the hamlets/villages based on the cultural-historical views, motivations and the purposes.

- a. The toponyms of naming the hamlets / villages in the province in accordance with History and Culture are rooted in the history of life in the region categorized as *istanasentris*, whereas *nonistanasentris* region, the naming is mostly rooted in the history and culture of everyday life. The name of the relatives of the palace official, the palace officials, soldiers, and

professions in the life of the palace became the dominant source of naming hamlets/villages in regions which are categorized as *istanasentris* (close to the cultural center), while the names of plants and folklore become the dominant source of naming hamlets/villages in the region considered as *nonistanasentris* (away from the cultural center).

b. Motivation and Objectives and Reasons of Naming the hamlets/villages in DIY

Motivation and purposes of naming the hamlets/villages in the *Istanasentris* regions in DIY (District of Kraton, Matrijeron, Gedongtengen, Pakualaman, and Kota Gede), are found in 14 different kinds, whereas in the *nonistanasentris* regions (Subdistrict of Pajangan, Imogiri Wonosari, and Tepus) there are 17 kinds.

c. Motivation, purposes and the reasons of naming hamlets/villages in DIY

Along that motivation and purpose of naming the hamlet/village is quite varied so that the reasons are also varied, for example, there are 22 reasons found in *istanasentris* region and 21 reasons in *nonistansentris* region.
